5  
**EASY STEPS**

**#1**

Start with a sheet of 8.5 x 11 paper. Set your printer scale to 100%

**#2**

Print this page and stand on these feet. (If you plan to wear heavy socks, put those on before doing this size test.)

**#3**

Line up your heel first and then your toes.

**#4**

Do they reasonably fit within the lines? (We're not looking for perfection here, just a good estimate of your size. Length matters the most.)

**#5**

If they're within the lines, this is your size. If they're not, go up or down a half size and try again.

Remember, that no two feet are identical (you already know that from buying shoes your whole life). This is simply a tool to make pegging your size a little easier.

If you buy the wrong size, no problem. You can exchange your shoes, as long as you meet our return requirements. Easy peasy.
